

# TETRAX “Mini” Interactive Balance System For Accurate and Affordable Fall Risk Assessment!

*For maximum portability!*

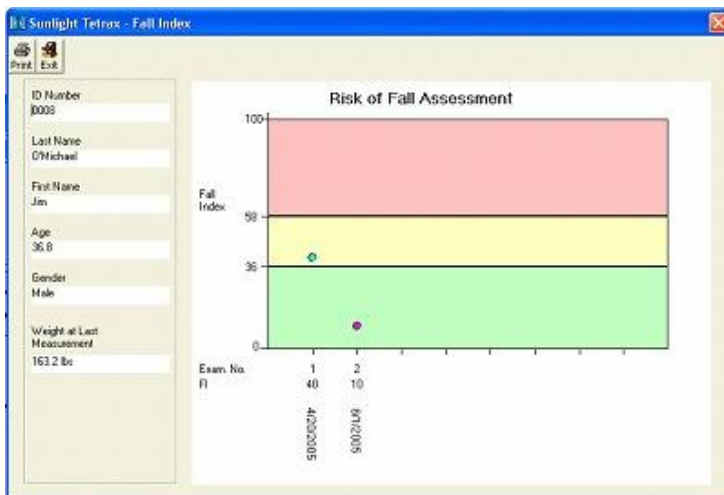

The ultimate in portable balance testing and re-training! Provide a fall risk assessment result in as little as 5 minutes. This carry case - force plate package can be added to an existing PC or Sunlight Omnisense unit. The system can be set up in a few minutes in any office, with no major technical know-how required for set-up. The entire package comes in a briefcase that can be carried in one hand, making the system ideal for small clinics, physiotherapists on home visits, health fairs, clinics with alternating physicians and mobile health screening. The Omnisense unit must be a newer model & upgradeable to Windows XP.

## **Aids in the determination of Neurological, Vestibular, Orthopedic problems and drug interactions!**

The Tetrax balance system is designed to test balance and stability non-invasively and provide balance training for patients. The Tetrax system is the best way to accurately diagnose stability problems and pinpoint their source. The device is in use in rehabilitation and ENT clinics, sport medicine centers, and geriatric treatment centers around the world. With its user-friendliness and accurate, non-invasive testing, it has become an important focus of overall health for patients with a wide range of problems.

With up to 50% of senior citizens and 20-30% of all adults at risk of falling or dizziness, balance testing has also become an increasingly important standard test for adult patients, often used alongside bone strength testing with Sunlight Omnisense for comprehensive fracture risk testing for the patient.

## *Fall Risk Assessment*

Fall index results are computed in one of three categories: **Low, Medium and High Risk of Falling**. Based on the fall index results and individual needs and requirements of the patient, the clinician can make decisions regarding exercise programs, nutrition education, the need for balance aids, and other assistance.

- Great for Health Fairs and Wellness events!
- Use for home and long term care visits!
- Obtain baseline on patients prior to care!
- Monitor treatment progress over time!
